

MANTRA MYAUTH

Enterprise Edition

Secure & Scalable Enterprise Identity
& Access Management

» PROBLEM

Small-to-Medium and Large Enterprises are increasingly facing challenges related to identity and access security breaches and compliance regulations. With staff working remotely and a challenging economic environment, the pressure on business and their IT departments to ensure an effective identity and access management security and privacy has never been greater or more critical. Combine this with a significant skills shortage of IT Administration and Development in the sector, demand is growing for simple solutions that work effectively and can be scaled up easily in the long run.

» SOLUTION

MyAuth Windows Identity and Access Management is all about making the complex simple. It is useful for those enterprises who want to enhance identity and access security by adding additional layer of security through biometric and multifactor authentication. This applies but not limited to banking, finance, manufacturing and healthcare industries.

MyAuth access solutions are built around Finger Print Biometrics and Multifactor Authentication (MFA).

» BENEFITS

MyAuth identity provisioning system helps enterprises ensure that the right users have access to the right applications and infrastructure in the most secure way (Biometrics and Multifactor Authentication). It provides a secure, automated identity lifecycle management solution that helps enterprises automate provisioning and de-provisioning of all user accounts.

» MYAUTH IDENTITY & ACCESS MANAGEMENT LIFECYCLE

End-User Provisioning (Account Provisioning) is triggered by events like hiring, promotions, and transfers. Deprovisioning, on the other hand disabling or removing a user's access to a windows based application. End-User provisioning with help of MyAuth helps keep your company's identity and access secure by ensuring employees, partners or customers have access only to the apps they need.

Deprovisioning helps keep your company secure by ensuring that whenever an employee, partner or customer leaves, their access is automatically removed for all connected applications.

» KEY BENEFITS

CUSTOMIZED DEVELOPMENT

On-Demand Custom Development For Enterprise requirements

1

MYAUTH CONNECTORS

Flexible integration with MySQL, Microsoft Access, Microsoft SQL Server, Oracle Database, and on-demand integration of existing Finger Print data.

2

SINGLE-PAGE APP

Secure single-page sign in to access your critical application

3

USER LIFE CYCLE MANAGEMENT

Provisioning and De-provisioning of End-User Authentication

4

CENTRALIZED ACTIVE DIRECTORY SETUP

5

EASY BIOMETRICS DEVICE INTEGRATION

Integrated with Popular Mantra Fingerprint Devices:

6

BIOMETRIC AUTHENTICATION

High assurance finger print biometric authentication

7

IDENTITY ESSENTIALS

Best-in-class Multi-factor Authentication for Windows-based organizations.

8

MFS100

MARC10

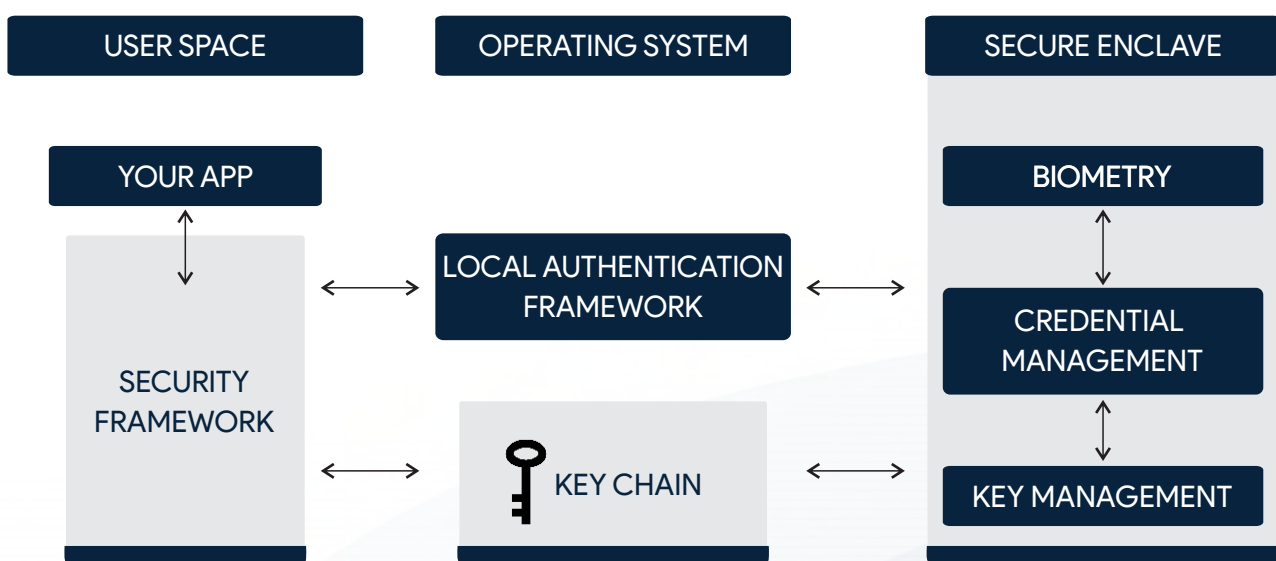

MELO31

MFS500

» KEY FEATURES & FUNCTIONS

- Supports Windows OS 7, 8, 8.1 and 10
- Enrol Users and fingerprint biometrics data.
- Secure storage of fingerprint biometrics data with encryption
- Data Transmission over HTTPS to guarantee confidentiality, authenticity, and integrity.
- Multi-factor authentication options:
 - **Fingerprint or Password**
 - **Fingerprint and Password both**
- Generate User Master and Transaction Logs
- Finger Print Spoof Detection
- Choice of selection of wide range of cost effective, world class MANTRA fingerprint sensors supported with the product.
- Flexibility to backup the encrypted enrolled biometrics data and store into a file, which can be later restored back in-case of server re-installation or new server setup.
- Biometric Quality Setting
 - **Customized Finger Print Recognition Quality Setting:**

» HOW MYAUTH WORKS IN A QUICK & EASY WAY

» FREQUENTLY ASKED QUESTIONS

1. How Does MyAuth for Windows Work?

A: MyAuth is a biometric authentication feature that helps strengthen authentication and guard against potential spoofing through fingerprint matching. When a user wants to access protected application, the authentication process begins with the user entering a PIN and/or biometric finger print to unlock the windows device.

2. How do we benefit from using MyAuth Windows Version?

A: MyAuth for your applications would replace passwords with strong two-factor authentication on devices and therefore protects against credential thefts or misuse. This authentication consists of Password and finger print biometric.

3. Where is MyAuth Data Stored?

A: The biometric data is stored in your own on-premise server. It is never sent to external devices or servers.

4. Has MyAuth set any finger print device requirements?

A: Finger print device matching may require quality score setting for finger print image recognition quality.

5. Do we need to buy Finger Print device to enable MyAuth?

A: Yes. You need to have a Mantra finger print device to use "MyAuth" secure login authentication.

» ABOUT MANTRA SOFTECH

Today more than ever, company's demand seamless, secure experiences, whether they're managing corporate networks, data, users and devices.

Mantra Softech and its MyAuth solution secures a rapidly changing world by enabling trusted identities and data protection. Mantra Softech have nearly 20 years experience and during that time we have worked with some fantastic customers in government, banking, finance, manufacturing, healthcare, logistics and pharmaceutical Industry. By listening to their needs and the industry as a whole we understand the need for reducing complexity where possible.

The MyAuth platform provides organisations the ability to consolidate a number of identity and access security technologies, managed from one pane of glass. This provides significantly reduced access administration, a simplified user experience combined with improved security via enhanced visibility.
